

■ **What It Is:** As gadget-laden consumers rely more on their car batteries to power up, two-prong power outlets and strips like the ones found in homes are cropping up in cars.

■ **How to Get It:** The 2007 Jeep Compass offers an optional 115-volt two-prong AC electricity outlet hidden under the front seat center console between the driver and passenger seats. (The typical voltage of a household socket is 120-volts.) The 2008 Mercury Hybrid Mariner has an optional 110-volt socket in front of the shift control. The 2007 VW Touareg's rear-cargo section features child-proofed outlets (a 115-volt AC and a 12-volt DC). Honda's Odyssey minivan also offers a 115-volt AC covered power outlet in the third row section. For vehicles without built-in outlets, the Headrest Powerworks power inverter plugs into any 12-volt outlet and provides 110-volt power; it has straps that allow the strip to hang off the back of the front seat for backseat typing. Headrest Powerworks power inverter allows for back-seat typing.

also plugs into a 12-volt DC outlet; it powers one 115-volt AC outlet and a USB port.

- **Upside:** These devices let you run a number of small appliances, from curling irons to coolers to electric shavers and small television sets from your parked car.
- **Downside:** The threshold for powering appliances varies for each car but expect a range between 100 to 150 watts; as a result, don't look to power any

vacuum cleaners, blenders, juicers, pressors, mini-fridges or desktop computers. Also, the engine must be running continuously to supply power to a 115-volt outlet. While conditions vary, look for a 1 1/2 to two-hour window to run a device before you risk burning out your car battery.

■ **Cost:** The Jeep Compass offers the 115-volt auxiliary power outlet bundled within a special equipment package (\$2,850), or standard on the 2007 Jeep Compass Limited. Mercury offers the outlet within the Moon and Tune package, which also includes moonroof and satellite radio (\$180). The outlets are standard on the VW Touareg, including 2007 and 2008 models. The covered outlets are available only on the Odyssey's Touring model. The Headrest Powerworks inverter is \$49.98 from GetOrganized.com (<http://www.shopgetorganized.com/>). Find the Xantrex Technologies XPower Pocket (\$30) on Amazon.com.
